# Boilerview

Boiler View is an integrated control software package suitable for all types of boilers. It uses a Programmable Logic Controller to control the boiler and a Scada package for the visual interface with the

operator. Boiler View can be used with any make or model of boilers, including fully unattended systems.

## Specifications

Controls	
PLC system	Allen Bradley
Operating system	Microsoft
Remote access	Via dial up modem
Electrical	
Power supply	240 v AC
Power conditioning	Uninterruptible Power Supply supplied with the system
Reporting	
Piece count	Yes
Production reporting	Yes
Logging of alarms	Yes

### Note!

Features described on this sheet may vary between installations to suit the requirements of each machine.

## Features

- Colour graphics of the boiler, fuel handling and water treatment systems
- Extensive alarms on all boiler faults, with four levels of security, these can also be used to dial a phone, pager or mobile
- Historical and Real Time trending on all process variables - this is excellent for monitoring the performance of the plant and fault finding
- Setup page - All variables that the operator needs to tune to get optimum performance for the present conditions are provided on a setup page
- Automated start-up sequence - The program is designed to start and stop the boiler plant in a controlled logical sequence, with full manual control available to the operator on every piece of plant equipment
- Can be accommodated on any PLC or Scada Package, depending on the site's standardisation policy

## Support

The Boilerview system can be accessed remotely via dial up modem for offsite fault diagnosis and monitoring. Technician support is available by contacting the Automation & Electronics office
